

# The Best of Bolder

## for NI Kontakt 2 & the Apple EXS24

*The Best Of Bolder double CD ROM was released for Gigastudio in April of 2002. It consisted of choice Material from previous Bolder libraries. This volume is a continuation of converting that library into natively programmed instruments for NI Kontakt and the Apple EXS 24. Other volumes that have already been converted are: Celtic Pipes, Crystal Glasses and Meditation Bowls, Suspended Slate Rocks and the Granular Selections.*

### **B.O.B American Folk Instrument List**

**Autoharp** - This is a Oscar Schmidt autoharp with a solid wood top. Typically this instrument is strummed. However it is very nice to play as a keyboard-like instrument also. Try layering it with some pad sounds! The “Strummed Chords” program employs major chords from E2-A3 and minor chords from A#3 - C6. “Swirls and Stuff” are dream-like atmospheric type effects. The “Swirl Layers” are transposed layers of the atmospheric samples..... they are quite fun to experiment with!

**Banjo** - This is a stereo recording of a Deering banjo. You will notice an oddly placed single high G note at G2 on your keyboard. This is the high string of the banjo (5th string - usually played as an open string). If you want to make some convincing banjo “rolls” - just hold down your sustain pedal and do a simple arpeggio pattern involving this note and 2 to 3 other notes. Example: with the sustain pedal down.... play G2, C4, E4, then G2, D4, G4, then G2, B3, G4 quickly..... you get the idea! The MW is used also to control various filter settings as well as mixing in harmonics samples to the original pitch of the string.

**Hammered Dulcimer** - Nothing too tricky about this program bank - a basic program map. If you are looking for a more detailed sample library of this instrument, check out the Bolder’s Hammered Dulcimer Trilogy.

**Fretless Gut-Strung Banjo** - This is quite an unusual instrument with a very distinctive sonic character. Not only is it a fretless banjo.... it has gut strings and has a lute-like gourd back to it! As with the Deering banjo sampled in this collection - There is a lone F note located at F2 which is the 5th string of the banjo typically played by the thumb as sort of a drone note used in rolls.

**Louden Steel String Guitar** - This is also my personal guitar, this guitar is a favorite of Celtic musicians. Just one velocity layer is sampled along with natural harmonics. There are two programs which use the Mod Wheel to mix the harmonics with the natural plucked sample of the guitar.

**Mandolin, Mandola and Mandocello** - Here we have the 3 members of the mandolin family. Their ranges correspond exactly to the violin, viola and cello. I have sampled all three instruments both plucked and tremolo. They are presented in programs featuring 1 articulation only and then they are presented as different types of layers - velocity switch as well as the mod wheel (cc #1) acting as a mixer control.

**Marxophone** - This is an early American instrument very similar to the construction and sound of a Hammered Dulcimer. However it has built in mallets which are spring loaded and triggered by pushing a button. It was one of those instruments that was designed so that “anyone” could play it..... push a button and get a note. It also has a most unusual tremolo like feature where the note is repeated by bouncing the mallet on the strings. In the programs I’ve called this effect “tremolo”, but that may not be accurate. There is no denying that this instrument has quite a unique sonic quality. Techniques of programming are my usual “bag of tricks” when it comes to an instrument which was sampled with tremolo and “straight”. Various filter controls are employed as well as layers controlled by the Mod Wheel. Thanks again to my friend Tom Wasinger for letting me sample another one of his unusual creatures.

**Acknowledgements and Thanks to the following people for their contributions to making this library possible.**  
Tom Wasinger,, all the folks at H.B. Woodsongs in Boulder and Garth Hjelte at Chicken Systems - Translator.

GENERAL LICENSE CONDITIONS: You may use these samples in any type of music production, i.e. making demos, records, remixes, commercials, jingles, post productions, commissioned pieces, soundtracks for film, theatre, musicals, live performances, computer games or multimedia.

Samples may not be utilized or resold in the form of Library Music or Sample-related endeavors (e.g. “Joe’s Sample Collection” which contains our products). Written permission from Bolder Sounds is required. You CAN NOT trade, re-sell, lend, rent, copy, duplicate, upload or download to any database, BBS, or Server any of our sounds because Bolder Sounds owns the rights to the samples, Bolder is licensing these to a single user for music production.

\* On a personal note..... Please think twice before making a copy of this disc for a friend or anyone else. All the legal mumbo jumbo in the world is not going to stop piracy of discs such as this. Many hours of work has gone into this library, I have also gone to great lengths to make this disc as affordable as I can so that this disc is NOT pirated. As always..... please put yourself in our shoes before making a decision whether to copy this data for purposes of piracy or not.

Thank You!
