

What's new in Bluegrass Banjo V3

1. New samples recorded for five different pluck positions along the string length of the banjo as well as Scruggs-Keith tuner mechanism samples. The size of the new recorded samples are approximately 1.65 GB, so the total size of the library is now 3.15 GB (1.52 GB Kontakt ncw File).
2. The new Scruggs articulations can toggle between eight different bends and you can adjust the speed.
3. The new Pluck Positions can either be selected via Key Switches or via a very advanced Pluck Position velocity selection system. You can freely adjust at what velocity level the different positions will be selected and make any kind of position combinations. All the settings can be saved as Presets.
4. The scripted Auto Fret Selection can now be turned On/Off.
5. A new intelligent Pitch Bend control is added to the already advanced Pitch Bend system.
6. A new improved P.B. Vibrato and Vibrato system, where you among other can select between 7 different scripted waveforms.
7. You can freely adjust how velocity controls the volume and the filter cutoff.
8. Resonance can be added to the banjo via an Impuls Response made from the banjo.
9. The Attack and Sample Start of the "Hammer On" and "Pull Off" articulations, can now be adjusted and saved as Presets.
10. All the various Key Switches can now be freely assigned and saved as Presets.
11. The Bluegrass Banjo V3 also includes 379 Midi files to help you build realistic banjo arpeggios and chords.

Creative Sample Libraries Since 1992
