

What's new in ROCK Music V2

1. You can now use the Sustain Pedal when you play the Loops. When the Sustain Pedal is pressed down and you play a key that already has a loop playing, then the loop will be retriggered.
2. With the new "Set Key Focus" Key Switch you can select the Loop that'll have the Edit Focus without triggering the loop. This can be very useful when you play live and use the Sustain Pedal.
3. With the two new Key Switches - "Auto Select On" and "Auto Select Off " - you have full control of the Focus when you are tracking in your DAW. These two new Key Switches works great together with the three Edit # X Tempo Key Swithes.
4. The Pitch Bend can be turned On/Off according to the Conditions, so you have the full control of what will be affected by the Pitch Bend.
5. Various optimizations and small bug fixes.
